

Product Overview

Version 01. Mai 2024

With this product overview you can assemble the appropriate components for your application in a fast and simple way. You keep the overview of all types with all possible options and cabling requirements.

INTAX® Linear Motor Axes with integrated servo controller

ELAX® Electric Slide

LINAX® Linear Motor Axes

Lxc = compact
Lxu = universal
Lxs = shuttle
Lxe = exclusive

ROTAX® Rotary Motor Axis

Rxvp = vacuum pressure
Rxhq 50 = high torque
Rxhq 110 = high torque

XENAX® Servo Controllers

Xvi 75V8S
Xvi 48V8
Xvi 75V8

Content

1	INTAX® Linear Motor Axes with integrated servo controller	5
1.1	Connecting Cable INTAX®	7
1.2	INTAX® Bus communication	7
1.3	Mounting INTAX®	8
2	ELAX® Electric Linear Motor Slide	9
2.1	Connecting Cable ELAX®	10
2.2	Extension or Intermediary Cable Removable ELAX®	11
2.3	Vertical Weight Compensation ELAX®	12
2.4	Chrome Steel Cover ELAX®	15
2.5	Arrangement Possibilities with Direct Screw Connection ELAX®	15
2.5.1	Y-Z Pick and Place flat	15
2.5.2	Cross Table Fitting.....	15
2.5.3	X-Z Pick and Place Upright	16
2.6	Fixing Screws ELAX®	16
2.7	Dowel Bushings Ø6 and Ø7 ELAX®	16
3	LINAX® Linear Motor Axes	17
3.1	LINAX® Lxc (compact)	17
3.1.1	Measuring System with 100nm Resolution LINAX® Lxc	18
3.1.2	Connecting Cable LINAX® Lxc.....	18
3.1.3	Removable Extension Cable LINAX® Lxc	21
3.1.4	Vertical Weight Compensation compressed air LINAX® Lxc.....	22
3.1.5	Piston seal for weight compensation compressed air LINAX® Lxc	22
3.1.6	Vertical Weight Compensation with Spring LINAX® Lxc	22
3.1.7	Dirt Wiper on Magnet Track LINAX® Lxc F40	23
3.1.8	Fixing Screws for Monobloc LINAX® Lxc	23
3.1.9	Cross Table Fixing Screws LINAX® Lxc	24
3.2	LINAX® Lxu (universal).....	25
3.2.1	Measuring System with 100nm Resolution LINAX® Lxu	26
3.2.2	Connecting Cable LINAX® Lxu	27
3.2.3	Removable Extension Cable LINAX® Lxu	28
3.2.4	Vertical Weight Compensation LINAX® Lxu	29
3.2.5	Piston seal for weight compensation compressed air LINAX® Lxu.....	29
3.2.6	Spring Operated Brake LINAX® Lxu	30
3.2.7	Cover Caps for Screws LINAX® Lxu	30
3.2.8	Cross Table Fixing Screws LINAX® Lxu.....	30
3.2.9	Adapter Plate LINAX® Lxu.....	31
3.2.10	Front Flange LINAX® Lxu	31
3.2.11	Cantilever Armor LINAX® Lxu.....	31
3.2.12	Additional Carriage Slider LINAX® Lxu	32
3.2.13	Examples of X-Z Construction Possibilities LINAX® Lxu.....	32
3.3	LINAX® Lxs F60 (shuttle).....	33
3.3.1	Measuring System with 100nm Resolution LINAX® Lxs F60	35
3.3.2	Connecting Cable LINAX® Lxs F60.....	36
3.3.3	Removable Extension Cable LINAX® Lxs F60	37

3.3.4	Cover Caps for Screws LINAX® Lxs F60	38
3.3.5	Fixings Screws for Ground Plate LINAX® Lxs F60	38
3.3.6	Cross Table Fixing Screws LINAX® Lxs F60	38
3.3.7	Additional Carriage Slider LINAX® Lxs F60	39
3.3.8	Spring Operated Brake LINAX® Lxs F60	40
3.4	LINAX® Lxs F120 (shuttle)	41
3.4.1	Connecting Cable LINAX® Lxs F120	43
3.4.2	Fixings screws for ground plate LINAX® Lxs F120	44
3.4.3	Cross table fixing screws LINAX® Lxs F120	44
3.4.4	Cover tape for screws of ground plate LINAX® Lxs F120	44
3.4.5	Additional carriage slider LINAX® Lxs F120	45
3.5	Gantry	46
3.5.1	Rotary and linear joints Gantry LINAX® Lxs F60 / F120	46
3.5.2	Adapter plates Gantry LINAX® Lxs F60 / F120	46
3.5.3	Support base plate Gantry Lxs F60 / F120	47
3.5.4	Gantry Master-Slave Synch Cable	47
3.6	LINAX® Lxe (exclusive)	48
3.6.1	Measuring System with 100nm Resolution LINAX® Lxe	49
3.6.2	Connecting Cable LINAX® Lxe	49
3.6.3	Removable Extension Cable LINAX® Lxe	50
3.6.4	Fixing Screws LINAX® Lxe	51
3.6.5	Cross Table Fixing Screws LINAX® Lxe	51
3.6.6	Additional Carriage Slider LINAX® Lxe	51
3.7	Maintenance	53
3.7.1	Cleaning Glass Scale of LINAX®	53
3.7.2	Lubricating Cross Roller Guides ELAX® and LINAX® Lxc	53
3.7.3	Lubricating Ball Bearing Guides LINAX® Lxe/Lxs/Lxu	54
3.7.4	Lubrication sets with dosage pistol and lubrication cartridges	55
4	ROTAX® Rotary Motor Axis	56
4.1	ROTAX® Rxvp with Vacuum/Compressed Air Feedthrough	57
4.1.1	Types of compressed air connections	58
4.1.2	Connecting Cable ROTAX® Rxvp	59
4.1.3	Extension or Intermediary Cable Removable ROTAX®	60
4.1.4	Hose Coupling ROTAX® Rxvp	61
4.1.5	Hose ROTAX® Rxvp Vacuum/Compressed Air Feedthrough	61
4.1.6	Angle Bracket ROTAX® Rxvp to LINAX® Lxu	61
4.1.7	D-Open End Spanner ROTAX®	62
4.1.8	Hose- and Cable Feedthrough ROTAX®	62
4.1.9	Y-Z-R Pick and Place Upright	62
4.2	ROTAX® Rxhq 50-12T0.3 (High Torque)	63
4.2.1	ROTAX® Rxhq 50-12T0.3	64
4.2.2	Connecting Cable ROTAX® Rxhq 50-12	65
4.2.3	Extension and Intermediary Cable Removable ROTAX® Rxhq 50-12	66
4.2.4	Fixing screws with distance bushings ROTAX® Rxhq 50-12 on rear side	67
4.2.5	Dowel bushing D7x5 ROTAX® Rxhq 50-12 for flange side mounting	67
4.2.6	Dowel bushing ROTAX® Rxhq 50-12 for Front flange	67
4.2.7	Angle Bracket ROTAX® Rxhq 50-12 to LINAX® Lxu F60	68
4.2.8	Angle Bracket ROTAX® Rxhq 50-12 to LINAX® Lxc F10/F40	68
4.2.9	Angle Bracket ROTAX® Rxhq 50-12 to ELAX® Ex F20	68

4.3	ROTAX® Rxhq 110-50T1.5 (High Torque)	69
4.3.1	ROTAX® Rxhq 110-50T1.5	70
4.3.2	Connecting Cable ROTAX® Rxhq 110-50T1.5	71
4.3.3	Extension and Intermediary Cable Removable ROTAX® Rxhq 110-50T1.5	72
4.3.4	Fixing screws with dowel bushings ROTAX® Rxhq 110-50T1.5	72
4.3.5	Dowel bushings ROTAX® Rxhq 110-50T1.5	72
4.4	ROTAX® Rxhq 110-50T4.0 (High Torque)	73
4.4.1	ROTAX® Rxhq 110-50T4.0	74
4.4.2	Connecting Cable ROTAX® Rxhq 110-50T4.0	75
4.4.3	Fixing screws with dowel bushings ROTAX® Rxhq 110-50T4.0	76
4.4.4	Dowel bushings ROTAX® Rxhq 110-50T4.0	76
5	XENAX® Servo Controller	77
5.1	XENAX® Servo Controller Model Overview	78
5.1.1	Licenses for XENAX® Xvi 48V8	79
5.1.2	PLC and Optio Kabel	79
5.1.3	Start-up Key	79
5.1.4	I/O Box for Commissioning and Testing	80
5.1.5	Brake Energy Converter	80
5.1.6	Cable for Brake Energy Converter	80
5.1.7	EMC Shielding Clamp for Motor Cable	81
5.1.8	Y-Cable for Encoder Signal Pick-Up	81
5.1.9	Master-Slave Cable	81
5.1.10	Computer Cable PC/Laptop for RS232	81
5.2	XENAX® Xvi Bus modules	82
5.3	Xvi 75V8/S Safety Motion Unit (SMU) TÜV certified	83
5.4	Forceteq® pro	84
5.4.1	Signateq® Force Measuring Amplifier	84
5.4.2	Compact Jenny Science sensor-housing	85
5.4.3	Load cell Burster without housing	86
5.4.4	Load cell Burster with overload protection	86
6	Commercial Products	87
6.1	AC-Servo Motor (new intercontec plugs)	87
6.1.1	Connecting Cable AC-Servo Motor	87
6.2	Ultra Compact Rotary Axis with Hollow Shaft	88
6.2.1	Ultra Compact Rotary Axis Connecting Cable	88
6.3	Round Table with Direct Drive and Hollow Shaft	89
6.3.1	Round Table with Direct Drive and Hollow Shaft and extension cable	89
6.4	Setup and Cabeling of non Jenny Science Motors	90

1 INTAX® Linear Motor Axes with integrated servo controller

INTAX® = integrated Axis

- Integrated servodrive, motor wiring and cable chain
- Two connectors only, one for Ethernet Bus (EtherCAT, Ethernet, Profinet etc.) and the other for 12V – 36VDC
- Absolute measurement system with 1µm resolution, no reference drive necessary
- No space is required in the control cabinet

Type	Stroke [mm]	Force Fn/Fp [N]	Weight Slider/Total [g]	L Installation [mm]	Art. No
Tx 50F08	50 (1.97")	8/24 (1.8/5.4 lbf)	170/425 (0.37/0.94 lbs)	149 (5.87")	125.00.00
Tx 100F08	100 (3.94")	8/24 (1.8/5.4 lbf)	170/550 (0.37/1.21 lbs)	201 (7.91")	125.01.00
Tx 200F08	200 (7.87")	8/24 (1.8/5.4 lbf)	170/800 (0.37/1.76 lbs)	299 (11.77")	125.02.00
Tx 400F08	400 (15.75")	8/24 (1.8/5.4 lbf)	170/1300 (0.37/2.87 lbs)	500 (19.69")	125.03.00
Tx 600F08	600 (23.62")	8/24 (1.8/5.4 lbf)	170/1800 (0.37/3.97 lbs)	700 (27.56")	125.04.00

Magnetic absolute measurement system with 1µm resolution and bidirectional repetitive accuracy +/- 2µm

«GO» and the axis runs!

Everything runs automatically:

Simply connect the USB-C cable and a virtual network adapter is created on the PC/laptop. And by entering «run.Webmotion» in Windows Explorer, the web browser opens with WebMotion®. Button Quick Start, click on «GO» and the axis is running. No download, no installation of an app, no purchase of a license code and no registration, very user friendly.

What's behind it?

The decisive factor is the integrated servo controller with web server and the WebMotion® graphical user interface. This HTML5-based operator interface can be accessed via any web browser.

For professional machine integration, the axis offers fully developed Ethernet fieldbus communication with various protocols.

With connection to the 24VDC supply, the axis is directly ready for operation. The power supply is separate for controller and power output stage. This means that STO is already included as a functional safety feature. If the power output stage is interrupted, communication is maintained.

A milestone of miniaturization

The INTAX® linear motor axis pushes the boundaries of miniaturization and shows what is technologically feasible today. The idea of physically building the servo controller into a motor axis is not new, and there are some servo motor suppliers that build the motion controller in directly. For linear motor axes, the INTAX® is the only solution available on the market with a fully integrated servo controller.

The INTAX® linear motor axes were specifically designed for miniaturization to integrate the electronic boards, motor wiring and cable trailing into the «free space» of the mechanical design. For this reason, the design of the axis was redesigned and the electronics were extremely compressed and distributed on different PCBs.

It is not visible from the outside where the servo controller is located. This results in an incredibly compact design with a slim, clear geometric shape. This allows engineers to build their machines and systems smaller and more space-efficient. Wiring, connectors and space for a servo controller are no longer required. And compared to conventional toothed belt and spindle drives, the INTAX® linear motor direct drive is more precise, faster and quieter.

1.1 Connecting Cable INTAX®

Simply supply main power and a communications cable and your system integration is complete!

The connecting cable for the power/logic and the communication are suitable for cable chains and are available from stock in a standard length of 1.5m (59"). Customized lengths from 0.1m (4") to 20m (787") are available on request. The power/logic connection cable has a minimum bending radius of 65mm (2.6") for continuous motion and 32mm (1.3") for fixed cables. The connection cable for the Ethernet connection has a minimum bending radius of 41mm (1.6") for continuous movement and 22mm (0.9") for fixed cables.

Connecting Cable shielded, suitable for cable chains	Length [m]	Cable Ø [mm]	Power/Logik Art. No.	Cable Ø [mm]	Ethernet Art. No.
INTAX® Temp. moving -25° up to +80° oil resistant	1.5 (59")	5.4 (0.21")	150.80.00	5.3 (0.21")	150.81.00
	0.1-20 (4"-787")		150.80.10		150.81.10

1.2 INTAX® Bus communication

For professional machine integration, the axis offers fully developed Ethernet fieldbus communication with various protocols. The fieldbus connector provides a direct connection to the PLC, where currently the EtherCAT, Ethernet I/P and Profinet protocols are supported, more will follow.

Together with the library, similarly to PLCopen®, the axis can be put into operation immediately in cyclic synchronized mode or in profile position mode. The linear measuring system with absolute position allows an immediate start, without prior referencing to a zero point.

2 ELAX® Electric Linear Motor Slide

ELAX® is the evolutionary step of the widespread pneumatic slides. The great accomplishment is the patented compact integration of the linear motor in the slider case, resulting in a force/volume ratio which has hitherto never been achieved. A further essential key factor for future oriented automation solutions with ELAX® are the components with direct screw connections, the flexible one-cable connection and the function "force calibration" with which you can control, limit and monitor forces – no need for an additional force sensor.

ELAX® data sheets and CAT data (STEP) can be downloaded from www.jennyscience.ch

Type	Stroke [mm]	Force F _n /F _p [N]	Weight slide/Tot. (+ weight comp.) [g]	L min [mm]	L max [mm]	Art. No

Magnetic measurement system with 1µm resolution and accuracy +/- 10µm

Note: ELAX® option cleanroom, food industry and pharmaceutical industry

The ELAX® can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

Cable Connection		Art. No
Ex F20	Cable connection mounted on the left side *)	136.05.00

* cable connection on the side not possible for vertical axes with weight compensation mounted on the left side.

2.1 Connecting Cable ELAX®

With ELAX® the cables are directly mounted into the linear motor case in favor of the compactness. The flexible one-cable connection is absolutely revolutionary which significantly simplifies the machine cabling. The cable is mounted on the back of the linear motor slide by default. **Optionally the cable can be mounted on the left side.**

In just one cable there are the wires for encoder, the 3 phases for the linear motor and for the communication between ELAX® and XENAX® servo controller. The anthracite colored **TPU** connection cables are clean room capable and as a standard length of 1.5m (59") on stock available. Custom lengths from 0.1 (4") up to 20m (787") can be supplied upon request. These connection cables have a min bending radius of **40mm (1.6") for moving cables** and **16mm (0.7") for fixed cables**.

As an option, extension cables are also available. The connection cables are fix mounted to the motor and are only sold together with the linear Motor Slide.

Connecting Cable shielded, suitable for cable chain	Length [m]	*) Linear Motor Type	15 Pol D-Sub Connector and 3 Pol Wago 3,5mm (0.14") Art. No 1

2.2 Extension or Intermediary Cable Removable ELAX®

Extension cables are also useful for highly dynamic multi axis applications with cable chains. The replaceable extension cable is plugged onto a connecting cable. These anthracite **TPU** extension cables have a min. bending radius of **40mm (1.6")** for moving cables and **16mm (0.7")** for fixed cables.

2.3 Vertical Weight Compensation ELAX®

In case of power interruption the linear motor of the ELAX® linear motor slides is powerless. If the axis is applied vertically, the slider falls downwards. With this weight compensation mounted **on the left side** * available for the ELAX® Ex 30F20 up to Ex 110F20, based on spring force, the slider moves upwards in case of power interruption.

The case of the ELAX® weight compensation can be equipped with different types of spring packages for external payloads of **0-500g (0-1.10lbs)**, **500-1000g (1.10-2.21lbs)**, **1000-1500g (2.21-3.31lbs)** and **1500-2000g (3.31-4.41lbs)**. For existing ELAX® linear motor slides with weight compensation, the spring packages can be reordered and can be replaced and mounted very simply on your own.

* A cable connection mounted on the left side (Art. No. 136.05.00) is not possible for ELAX® linear motor slides with weight compensation mounted on the left side.

2.4 Chrome Steel Cover ELAX®

With this chrome steel cover the modular matrix holes and threads are covered and the surface is smooth and easy to clean. With the cover the ELAX® linear motor slide becomes suitable for the food- and pharmaceutical industry or for clean rooms of laboratory automation or medical technology.

For ELAX®		Art. No

Please note: For ELAX® linear motor slides with weight compensation the chrome steel cover is not possible.

2.5 Arrangement Possibilities with Direct Screw Connection ELAX®

Modular system in perfection – An essential key factor when the ELAX® slides with direct drive were developed. No matter if held flat, upright, as cross table or as linear cantilever, the ELAX® slides can be directly screwed together by dowel bushing without the need of adapter plates. The hole matrix has always a grid of 20 x 50mm (0.79" x 1.97").

Front flange
Stainless steel,
rust-free 57mm x 27.5mm x 6mm,
(2.24" x 1.08" x 0.24")

3 LINAX® Linear Motor Axes

3.1 LINAX® Lxc (compact)

Compact series of linear motor axes in patented mono-bloc design.

The magnets move while the coils are stationary. This means that the cables are stationary and there are no movable cable chains necessary in single axis applications.

LINAX® Data sheets and **CAD files (STEP)** are available for download from www.jennyscience.ch

Model	Stroke [mm]	Force Fn/Fp [N]	Weight Slider/Tot. (+ Weight comp.) [g]	Art. No.

The very compact Lxc series are based on the patented mono-bloc design. The coils are located in the mono-bloc and the magnets are at the bottom of the carriage slider.

- Centering forced control for cross rolls cage as a standard
This centering force control prevents "cage creep" and increases the reliability and life time expectancy.
- Glass scale with a resolution of 1µm, accuracy +/- 2 µm
- Optional: A resolution of 100nm
- *) Optional: A vertical weight compensation is available.

Cross roll cage contains a centering forced control with two toothed racks and a cog wheel.
(System Schneeberger)

Note: LINAX® Lxc option cleanroom, food industry and pharmaceutical industry

The LINAX® Lxc can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

3.1.1 Measuring System with 100nm Resolution LINAX® Lxc

LINAX® Lxc 100nm	Option	Art. No
Lxc 44F08*)	100nm Messkopf mit redundanter Doppelabtastung	115.00.20
Lxc 85F10*)		115.01.20
Lxc 135F10		115.02.20
Lxc 230F10		115.03.20
Lxc 80F40*)		115.10.20
Lxc 176F40*)		115.12.20
Lxc 272F40		115.14.20

*) Optional: A vertical weight compensation is available.

The optical measuring system has a standard resolution of 1µm. This resolution can be increased to 100nm while the maximum travel speed of the slider carriage will be reduced to 0.9m/s. The 100nm resolution information is stored in the LINAX® linear motor axis and is automatically detected by the XENAX® servo controller.

Existing LINAX® glass scale linear motor axes in the field can be upgraded to 100nm resolution by Jenny Science.

3.1.2 Connecting Cable LINAX® Lxc

With the LINAX® Lxc the connecting cables are directly mounted into the case without plugs. For this reason, a high compactness is achieved. There are two connecting cables provided. One is for the encoder and the other is for the 3 linear motor phases. The additional lines in the encoder cable are for communication between LINAX® linear motor axis and XENAX® servo controller. The grey Lütze **PUR** connecting cables are compatible for continuous flexible operation in cable chains. Standard length is 1,5m (59"). Other lengths from 0,1 (4") to 20m (787") are available on request. The minimum bending radius for **moving cable** is **82mm (3.3")**. For **fixed cable**, the minimum bending radius is **41mm (1.7")**.

The optionally available, blue IGUS **TPE** connecting cables have a temperature range of -35° bis +100°. They are suitable for use in **clean rooms** and **oil resistant**. The minimum bending radius for **moving cable** is **44mm (1.8")**. For **fixed cable**, the minimum bending radius is **27mm (1.1")**.

Connecting Cable shielded, suitable for cable chain	Length [m]	*) Linear Motor Type	Cable Ø [mm]	Motor cable with 3 pole Wago, 3.5mm Art. No. 10	Cable Ø [mm]	Encoder cable with 15 pole HD D-Sub Art. No. 20

		Lxc 272F40		150.42.63		150.43.61

*) Each type of linear motor axis has internally different cable strip lengths; therefore they all have a different article identification number.

The connection cables are fix mounted to the motor and are only sold together with the Linear Motor Axes.

3.1.3 Removable Extension Cable LINAX® Lxc

Extension cables are also useful for highly dynamic multi axes applications with cable chains. Use short connection cables; then plug it into the extension cables. These extension cables run in the cable chain, and are easily replaceable. The grey Lütze **PUR** bending radius for **moving cable** is **76mm (3.0")**. For **fixed cable**, the minimum bending radius is **46mm (1.9")**.

Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants.

When using extension cables, the 3 pole Wago connector is replaced by a metallic shielded round jack from the manufacturing company "Binder".

3.1.4 Vertical Weight Compensation compressed air LINAX® Lxc

Weight comp. compressed air	Maximal force at 6 bar	Mounted on the left Art No.	Mounted on the right Art No.
Lxc44F08	3 kg (6.62lbs)	135.00.25	135.00.20
Lxc 85F10	3 kg (6.62lbs)	135.01.10	135.01.00
Lxc 80F40	6 kg (13.23lbs)	135.02.11	135.02.10
Lxc 176F40	6 kg (13.23lbs)	135.02.13	135.02.12

In case of a power interruption, the linear motor of the LINAX® axis is powerless. If the axis is applied vertically, the slider of the linear motor would fall downwards. With this weight compensation based on compressed air without air consumption, the slider remains in position or moves upwards depending on the air adjustment. For adjustment of the air pressure use a commercial **air pressure regulator**, for example Festo "VRPA".

A great advantage of the weight compensation is the support of the linear motor in vertical orientation. The motor runs without a static weight and is not heating in a stationary position. You get higher dynamics and at the same time you also save energy.

3.1.5 Piston seal for weight compensation compressed air LINAX® Lxc

Piston seal	Set	Art. No.
Lxc F08/F10	1 x Seal	135.01.05
Lxc F40	2 x O-ring already lubricated	135.02.05

3.1.6 Vertical Weight Compensation with Spring LINAX® Lxc

Weight comp. with spring	Maximal force	Mounted on the right Art No.
Lxc 44F08	0-200g (0-0.44lbs)	135.00.02
	200-400g (0.55-0.88lbs)	135.00.04
	400-600g (0.88-1.32lbs)	135.00.06
	600-900g (1.32-1.98lbs)	135.00.09

In case of power interruption the linear motor of the LINAX® linear motor axes is powerless. If the axis is applied vertically, the slider of the linear would fall downwards. With this weight compensation for the smallest LINAX® linear motor axis, mounted on the right side and based on spring force, the slider moves upwards in case of power interruption. It can be equipped with 4 different types of springs for external payloads of **0-200g (0-0.44lbs)**, **200-400g (0.55-0.88lbs)**, **400-600g (0.88-1.32lbs)** and **600-900g (1.32-1.98lbs)**.

3.1.7 Dirt Wiper on Magnet Track LINAX® Lxc F40

LINAX® F40	Type	Art. No.
Lxc 80F40	Dirt wiper incl. 2 form milled front plates to LINAX® Lxc F40	135.06.00
Lxc 176F40		135.06.05
Lxc 272F40		135.06.10

Due to the construction of these stronger Lxc F40 series the linear motor opening between magnets and coils is bigger than on the smaller Lxc F08/F10 types. This is why the optional dirt wipers are only available for the LINAX® Lxc F40.

Besides dirt, small parts such as small screws (watch industry) can get stuck in this gap. This can potentially damage poles or coils. With this dirt wiper, particles >2/10mm are prevented from entering in the linear motor.

3.1.8 Fixing Screws for Monobloc LINAX® Lxc

Linear Motor Type	Screws	Art. No.
Lxc F08 / Lxc F10	10 x hexagon socket screws M3 x 27mm (1.06") low head, stainless	135.10.01
Lxc F40	10 x hexagon socket screws M3 x 35mm (1.38") low head, stainless	135.20.01

The very compact dimensions of the LINAX® Lxc let just little room for connecting screws. This is why for the Lxc axes, screws with low heads are to be used. Screws with standard heads would potentially get jammed in cross table applications.

Lxc 44F08/85F10 = 1 Set
Lxc 135F10/230F10 = 2 Sets

Lxc 80F40 = 1 Set
Lxc 176F40/272F40 = 2 Sets

3.1.9 Cross Table Fixing Screws LINAX® Lxc

Cross Table	Screws and centering pins	Art. No.
Lxc F08 / Lxc F10	4 x hexagon socket screws M3 x 27mm (1.06"), low head 2 x centering pin Ø 2,5mm (0.1") h8 x 6mm (0.24"), stainless	135.10.00
Lxc F40	4 x hexagon socket screws M3 x 35mm (1.38"), low head 2 x centering pin Ø 2,5mm (0.1") h8 x 6mm (0.24"), stainless	135.20.00

The various LINAX® linear motor types can be directly mounted to each other without the need of adapter plates. For cross table combinations there are multiple grid patterns possible.

For the choice of the according screws, the upper mounted linear motor is relevant (For example if a LINAX® Lxc F10 is mounted on the top of a LINAX® Lxc F40, use fixing screw set for the Lxc F10).

3.2 LINAX® Lxu (universal)

These universal linear motor axes are real "all-rounders". There are three mounting possibilities: mounting to carriage slider; to the ground plate; or to the front face. The four long holes through the carriage slider allow direct screw connections for the back to back mounting of two LINAX® Lxu slides, which is ideal for X-Z handling. For vertical orientations, an optional weight compensation unit is available. The air pressure coupling is on the 90° "rotatable" connector case. This LINAX® Lxu linear motor axes can be controlled only with the powerful XENAX® Xvi servo controller.

Installation length = Stroke + 130mm (5.12")

The connector case is rotatable with a 90° pattern, in 4 directions. As standard, the motor is supplied with a "right-hand cable outlet" (with view of the connector housing).

Magnetic measurement system with 1µm standard resolution; accuracy +/- 8µm

*) These models are available with vertical weight compensation.

Note: LINAX® Lxu option cleanroom, food industry and pharmaceutical industry

The LINAX® Lxu can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

3.2.1 Measuring System with 100nm Resolution LINAX® Lxu

LINAX® Lxu 100nm	Type	Art. No.
Lxu 40F60*)	100nm Read-head with redundant double scanning	115.43.00
Lxu 80F60*)		115.43.02
Lxu 160F60*)		115.43.06
Lxu 240F60*)		115.43.10
Lxu 320F60		115.43.14

*) These models are available with vertical weight compensation.

The optical measuring system has a standard resolution of 1µm. This resolution can be increased to 100nm while the maximum travel speed of the slider carriage will be reduced to 0.9m/s.

All measurement systems have a separate reference track on the entire length with distance-coded reference marks. After a short move of maximum 10mm (0.4"), the absolute position is automatically calculated by XENAX® servo controller. No external "zero point sensor" is necessary.

3.2.2 Connecting Cable LINAX® Lxu

With the LINAX® Lxu (and Lxs) the cables are removable and are connected with D-Sub connectors to the connector housing. One cable is for the encoder and the other is for the 3 phases of linear motor. For the communication between LINAX® linear motor axis and XENAX® servo controller, additional lines for communication exists in the encoder cable. Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants. The **bending radius for moving cable is 98mm (3.9")**. For **fixed cable, the minimum bending radius is 50mm (2.0")**. The optionally available, darkblue **IGUS TPE** connecting cable has a **minimum bending radius of 44mm (1.8") for moving cable and of 27mm (1.1") for fixed cable**.

3.2.3 Removable Extension Cable LINAX® Lxu

Extension cables are also useful for highly dynamic multi axes applications with cable chains. Use short connection cables; then plug it into the extension cables. These extension cables run in the cable chain, and are easily replaceable. The grey Lütze **PUR** bending radius for **moving cable** is **76mm (3.0")**. For **fixed cable**, the minimum bending radius is **46mm (1.9")**. Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants.

When using extension cables, the 3 pole Wago connector is replaced by a metallic shielded round jack from the manufacturing company "Binder".

3.2.4 Vertical Weight Compensation LINAX® Lxu

In case of a power interruption, the linear motor of the LINAX® axis is powerless. If the axis is applied vertically, the slider of the linear motor would fall downwards. With this weight compensation based on compressed air without air consumption, the slider remains in position or moves upwards depending on the air adjustment. For adjustment of the air pressure use a commercial **air pressure regulator**, for example Festo "VRPA". The air pressure coupling is on the 90° "rotatable" connector case.

A great advantage of the weight compensation is the support of the linear motor in vertical orientation. The motor runs without a static weight and is not heating in a stationary position. You get higher dynamics and at the same time you also save energy.

Weight Compensation Lxu	Maximal force at 6 bar	Art. No.
Lxu 40F60	6 kg (13.23lbs)	135.03.01
Lxu 80F60		135.03.01
Lxu 160F60		135.03.05
Lxu 240F60		135.03.20

3.2.5 Piston seal for weight compensation compressed air LINAX® Lxu

Piston seal	Set	Art. No.
Lxu F60	1 x Seal 2 x O-ring already lubricated	135.03.15

3.2.6 Spring Operated Brake LINAX® Lxu

The spring operated brake is applied onto the guiding rail. In the “off” status the brake is inactive (non air-pressure). By activating a 3/2 way pneumatic valve, (for example Festo CPE10 M1BH-3GL-QS-4, Article No. 196 846), the brake is released with compressed air.

In use with the XENAX® Xvi servo controller, an OUTPUT FUNCTION can be assigned for the automatic control of the brake valve.

IMPORTANT: The stroke of the linear motor axis is reduced by 35mm (1.38”) with the installation of the spring operated brake. For example, the LINAX® Lxu 320F60 with a spring applied brake has a stroke of 285mm (11.22”) instead of 320mm (12.60”).

Spring Operated Brake	Maximal holding force	Art. No.
Lxu 80F60 to Lxu 320F60 (Hiwin guiding carriages)	Until 8 kg (17.64lbs)	135.03.32

3.2.7 Cover Caps for Screws LINAX® Lxu

Linear Motor Type	Cover Caps	Art. No.
Lxu F60	Cap to cover the LINAX® Lxu/Lxs screws on the guiding rails	135.08.00

Lxu40F60 = 16 pcs
Lxu 80F60 = 20 pcs
Lxu 160F60 = 28 pcs

Lxu 240F60 = 36 pcs
Lxu 320F60 = 44 pcs

3.2.8 Cross Table Fixing Screws LINAX® Lxu

Linear Motor Type	Screws and centering pins	Art. No.
Lxu F60	4 x hexagon socket screws M4 x 40mm (1.57”), 4 x centering pins Ø 4mm (0.16”) x 8mm (0.31”) stainless	135.11.10

The various LINAX® linear motor types can be directly mounted to each other without the need of adapter plates. The four long holes through the carriage slider allow direct screw connections for the back to back mounting of two LINAX® Lxu slides, which is ideal for X-Z handling or 1 Lxu can be fixed to a back wall.

3.2.9 Adapter Plate LINAX® Lxu

With this adapter plate a LINAX® Lxu slider can be connected to another LINAX® Lxu ground plate, incl. screws and centering pins.

Adapter Plate	Accessories	Art. No
Lxu 40F60 to Lxu 320F60	Adapter Plate incl. 2x centering pins 2.5x6, 4x centuring pins 4x8, 6x Torx M4x8 and 4x hexagon socket screws M4x40	135.12.00

3.2.10 Front Flange LINAX® Lxu

With the front flange it is possible to mount different Pick and Place orientations: The front plate of a LINAX® Lxu is replaced by the front flange which can directly be mounted to:

- to an ELAX slide (upright or flat),
- to a LINAX® Lxc F08/F10 or F40
- or to the carriage slider of another LINAX® Lxu.

Front Flange LINAX® Lxu	Accessories	Art. No.
For ELAX® Ex 30/50/80F20 upright	incl. 2 centering pins 4x8, 6 torx M4x8 and 2 dowel bushings D7 (Not usable for Ex 110F20 and 150F20)	135.12.02
For ELAX® Ex F20 flat	incl. 2 centering pins 4x8, 4 torx M4x8, 4 hexagon socket screws M3x30 and 4 dowel bushings D6	135.12.03
For Lxu	incl. 2 centering pins 4x8, 4 torx M4x12, 4 centering pins 2.5x5 and 8 torx M4x8	135.12.05
For Lxc F40	incl. 2 centering pins 4x8, 4 torx M4x12, 4 centering pins 2.5x5 and 4 hexagon socket screws M3x35	135.12.06
For Lxc F08/F10	incl. 6 centering pins 4x8, 8 torx M4x8 and 4 torx M4x12	135.12.07

3.2.11 Cantilever Armor LINAX® Lxu

The cantilever armour is used with long cantilever stroke constructions (e.g. with LINAX® Lxu 320F60) for maximum stability and minimal bending.

Linear Motor Type	Armor	Art. No.
Lxu 320F60	incl. fixing screws 14x M4x8 hexagon socket screws	135.13.10

3.2.12 Additional Carriage Slider LINAX® Lxu

With the LINAX® Lxu linear motor axes it is possible to assemble two or more carriage sliders on the same ground plate. The cable connector can be orientated on the left or right side of the slider. Each carriage slider requires a XENAX® servo controller.

Linear Motor Type	Type of carriage slider	Art. No.
Lxu xxxF60 mag. 1 µm	Additional carriage slider to LINAX® Lxu "universal" F60 with precise, self-lubricating ball bearing carriages, integrated linear motor with dirt wiper and magnetic measurement system , resolution 1 µm, accuracy +/-8µm	135.30.20
Lxu xxxF60 opt. 1 µm	Additional carriage slider to LINAX® Lxu "universal" F60 with precise, self-lubricating ball bearing carriages, integrated linear motor with dirt wiper and optical measurement system , resolution 1 µm, accuracy +/-2µm	135.30.22
Lxu xxxF60 opt. 100nm	Additional carriage slider to LINAX® Lxu F60, opt. 100nm with precise, self-lubricating ball bearing carriages, integrated linear motor with dirt wiper and optical measurement system , resolution 100nm, accuracy +/- 500nm	135.30.24

3.2.13 Examples of X-Z Construction Possibilities LINAX® Lxu

X-Z LINE PORTAL
(design for highest dynamic)

LINAX® direct connection; Lxu carriage slider to Lxu carriage slider. „Back to back mounting“.

The ground plate of the X-axis is mounted on the wall in upright orientation. The carriage slider of this X-axis is directly fixed to the carriage slider of the Z-axis. The Z-axis needs more installation space because the ground plate is moving. But this construction allows storing all cables in the same cable chain. The Z-axis is equipped with the optional weight compensation.

X-Z LINE PORTAL
(design for minimal installation space)

Lxu ground plate on Lxu carriage slider with adapter plate Lxu (3.2.9 Adapter Plate LINAX® Lxu).

The ground plate of the Z-axis is in a vertical orientation mounted on the wall. The ground plate on the X-axis is horizontally orientated and connected to the carriage slider of the Z-axis with the adapter plate. Since no ground plate is moving in longitudinal direction the installation space is minimal. The Z-axis also holds the weight of X-axis. Therefore, the Z-axis is equipped with the optional weight compensation.

Y-Z LINE CANTILEVER

The carriage slider of the Y-axis is fixed mounted. The carriage slider of the Z-axis is fixed vertical with the front flange of the Y-axis. The front flange of the Y-axis can be fixed with 90° pattern in 4 directions to the Z-axis. This allows the carriage slider of the Y-axis to be oriented on the left, on the right, upwards or downwards (like in the picture).

3.3 LINAX® Lxs F60 (shuttle)

These LINAX® linear motor axes can be controlled with the powerful XENAX® Xvi Servocontroller. As the name implies, the Lxs shuttle series are basic axes for long strokes up to 1600mm (63"). Of particular importance is the wide-body construction with recessed linear motor, through which the height is reduced to just 38mm (1.5"). The wide spaced guiding rails are able to withstand high moments of force. For example, for long Lxu cantilever axes.

Installation length = Stroke + 130mm (5.12")

The connector case is rotatable with a 90° pattern, in 4 directions. As standard, the motor is supplied with a "cable outlet right" (with view of the connector housing)

Type	Stroke [mm]	Force Fn/Fp [N]	Weight carriage slider/total [g].	Art. No. Magnetic measuring scale +/- 8µm	Art. No. optical measuring scale +/- 2µm

Lxs 1000F60		115.41.48
Lxs 1200F60		115.41.58

The optical measuring system has a standard resolution of 1µm. This resolution can be increased to 100nm while the maximum travel speed of the slider carriage will be reduced to 0.9m/s. All measurement systems have a separate reference track on the entire length with distance-coded reference marks. After a short move of maximum 10mm (0.4"), the absolute position is automatically calculated by XENAX® servo controller. No external "zero point sensor" is necessary.

3.3.2 Connecting Cable LINAX® Lxs F60

The connecting cable LINAX® Lxs F60 are identical to the connecting cable LINAX® Lxu and the connector cases are also rotatable with a 90° pattern, in 4 directions. Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants. The **bending radius for moving cable is 98mm (3.9")**. For fixed cable, the minimum bending radius is 50mm (2.0"). The optionally available, blue IGUS TPE connecting cable has a **minimum bending radius of 44mm (1.8") for moving cable and of 27mm (1.1") for fixed cable**.

3.3.3 Removable Extension Cable LINAX® Lxs F60

Extension cables are also useful for highly dynamic multi axes applications with cable chains. Use short connection cables; then plug it into the extension cables. These extension cables run in the cable chain, and are easily replaceable. The grey Lütze **PUR** bending radius for **moving cable** is **76mm (3.0")**. For **fixed cable**, the minimum bending radius is **46mm (1.9")**.

Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants.

When using extension cables, the 3 pole Wago connector is replaced by a metallic shielded round jack from the manufacturing company "Binder".

Extension cables shielded and suitable for cable chain	Length [m]	Cable Ø [mm]	Motor cable 3 pole binder round jack to 3 pole Wago-connector 3,5mm (0.14") Art. No. ⁽¹²⁾	Cable Ø [mm]	Encoder cable 15 pole HD jack to 15 pole HD connector Art. No. ⁽²¹⁾

Lxs 1200F60 = 7 Sets

Lxs 1600F60 = 9 Sets

In order to avoid mechanical vibrations of the long LINAX® Lxs linear motor axes, they have to be screwed with all fixing screws over the whole length onto a base plate.

3.3.6 Cross Table Fixing Screws LINAX® Lxs F60

Linear Motor Type	Screws and centering pins	Art. No.
Lxs F60	6 x hexagon socket screws M4 x 25mm (0.98"), 4 x centering pins Ø4mm (0.16") x 8mm (0.31") stainless	135.11.20

The various LINAX® linear motor types can be directly mounted to each other without the need of adapter plates. For cross table combinations there are multiple grid patterns possible.

For the choice of the according screws, the upper mounted linear motor is relevant

2 LINAX® Lxs F60 for high precision X-Y cross table

3.3.7 Additional Carriage Slider LINAX® Lxs F60

With the LINAX® Lxs linear motor axes it is possible to assemble two or more carriage sliders on the same ground plate. The cable connector can be orientated on the left or right side of the slider. Each carriage slider requires a XENAX® servo controller.

Additional Carriage Slider LINAX® Lxs	Type of carriage slider	Art. No.
Lxs xxxF60 mag. 1 µm	Carriage slider to LINAX® Lxs "shuttle" F60 with precise, self-lubricating ball bearing carriages, integrated linear motor with dirt wiper and magnetic measuring system , resolution 1 µm, accuracy +/-8µm	135.30.10

Lxs xxxF60 passiv	Passiv carriage slider with precise, self-lubricating ball bearing carriages. WITHOUT MOTOR & WITHOUT MEASURING SYSTEM. Does not require servo controller.	135.30.09

3.3.8 Spring Operated Brake LINAX® Lxs F60

The spring operated brake is applied onto the guiding rail. In the “off” status the brake is inactive (non air-pressure). By activating a 3/2 way pneumatic valve, (for example Festo CPE10 M1BH-3GL-QS-4, Article No. 196 846), the brake is released with compressed air.

In use with the ENAX® Xvi servo controller, an OUTPUT FUNCTION can be assigned for the automatic control of the brake valve.

IMPORTANT: The stroke of the linear motor axis is reduced by 35mm (1.38”) with the installation of the spring operated brake. For example, the LINAX® Lxs 200F60 with a spring applied brake has a stroke of 165mm (6.5”) instead of 200mm (7.87”).

Spring Operated Brake	Maximal holding force	Art. No.
Lxs (Schneeberger Guiding carriages)	Until 8 kg (17.64 lbs)	135.03.36

3.4 LINAX® Lxs F120 (shuttle)

Lxs F120

The Lxs F120 linear motor stages are designed for long strokes up to 1'600 mm as basic stage. The wide design with "recessed" linear motor is very advantageous, reducing the height to only 45mm. The wide spaced guides can absorb high force moments of the transverse cantilever stages.

All the LINAX® Lxs linear motor stage can be controlled with the latest, more powerful XENAX® Xvi 75V8S servo controller.

Note: LINAX® Lxs option cleanroom, food industry and pharmaceutical industry

The LINAX® Lxs can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

3.4.1 Connecting Cable LINAX® Lxs F120

Absolutely revolutionary is the flexible one-cable connection, which reduces the machine cabling effort considerably. In only one cable are the lines for encoder, for the 3 phases of the linear motor and for the communication between LINAX® Lxs F120 and XENAX® Servocontroller.

These connection cables have a minimum bending radius of **48mm for continuous movement** and **of 20mm for fixed cables**. Extension cables are also available as accessories.

The connector housing can also be rotated in 90° grid.

3.5 Gantry

Our gantry accessories with absolutely backlash- and maintenance-free spherical plain bearings not only offer maximum stability and precision, they also offer simple installation of the structure and simple commissioning with the XENAX® servo controller. We are thus setting new standards for user-friendliness and efficiency in demanding applications. Precise angular alignment is achieved by offsetting the sub-axis position to the master position in the XENAX® servo controller with an exceptional resolution of $\pm 1\mu\text{m}$.

3.5.1 Rotary and linear joints Gantry LINAX® Lxs F60 / F120

This set includes a rotary joint for the master axis and a rotary and linear joint for the sub-axis. All including the corresponding fastening screw set.

The selection of the type is made according to the gantry axes, regardless of the mounted cross axis.

Gantry axes typ	Accessories-Set	Art. No.
Lxs xxxF60	Rotary and linear joints for gantry axes incl. fixing screws	135.12.34
Lxs xxxF120		135.12.35

3.5.2 Adapter plates Gantry LINAX® Lxs F60 / F120

These 2 adapter plates are used to attach the transverse axes directly to the rotary and linear joints.

The selection of the type is made according to the cross axis, regardless of the gantry axes.

Cross axis type	Accessories-Set	Art. No.
Lxs xxxF60	2x Adapter plates to Rotary and linear joints Gantry incl. fixing screws	135.12.36
Lxs xxxF120		135.12.37

3.5.3 Support base plate Gantry Lxs F60 / F120

The aluminium or optionally carbon stiffening beams ensure the stability of the body and meet even the highest precision requirements.

Support Base plate	Type of axis	Art. No.

Note: LINAX® Lxe option cleanroom, food industry and pharmaceutical industry

The LINAX® Lxe can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

3.6.1 Measuring System with 100nm Resolution LINAX® Lxe

LINAX® Lxe 100nm	Type	Art. No.
Lxe 250F40	100nm Read-head with redundant double scanning	115.20.20
Lxe 400F40		115.22.20
Lxe 550F40		115.24.20
Lxe 800F40		115.26.20
Lxe 1000F40		115.28.20

The optical measuring system has a standard resolution of 1µm. This resolution can be increased to 100nm while the maximum travel speed of the slider carriage will be reduced to 0.9m/s. All measurement systems have a separate reference track on the entire length with distance-coded reference marks. After a short move of maximum 10mm (0.4"), the absolute position is automatically calculated by XENAX® Xvi servo controller. No external "zero point sensor" is necessary.

3.6.2 Connecting Cable LINAX® Lxe

Connecting Cable shielded, suitable for cable chains	Length [m]	Cable Ø [mm]	Motor cable with 3 pole Wago- connector, 3.5mm (0.14") Art. No.	Cable Ø [mm]	Encoder cable with 15 pole HD D-Sub connector Art. No.

3.6.3 Removable Extension Cable LINAX® Lxe

Extension cables are also useful for highly dynamic multi axes applications with cable chains. Use short connection cables; then plug it into the extension cables. These extension cables run in the cable chain, and are easily replaceable. The grey Lütze **PUR** bending radius for **moving cable** is **76mm (3.0")**. For **fixed cable**, the minimum bending radius is **46mm (1.9")**.

Through full PUR jacket and TPE / HGI insulation these cables are optimal for cable chains, extremely harsh operation conditions and an environment with aggressive coolants and lubricants.

When using extension cables, the 3 pole Wago connector is replaced by a metallic shielded round jack from the manufacturing company "Binder". The overall length of the cables of max. 20m and the number of intermediate cables of max. 3pcs. must not be exceeded.

Extension cables shielded and suitable for cable chain	Length [m]	Cable Ø [mm]	Motor cable 3 pole binder round jack to 3 pole Wago-connector 3,5mm (0.14") Art. No.	Cable Ø [mm]	Encoder cable 15 pole HD jack to 15 pole HD connector Art. No.

3.6.4 Fixing Screws LINAX® Lxe

Linear Motor Type	Screws	Art. No.
Lxe F40	10 x hexagon socket screws M4 x 12mm (0.47") stainless	135.11.01

Lxe 250F40/400F60 = 2 Set
Lxe 550F40 = 3 Sets

Lxe 800F40 = 4 Sets
Lxe 1000F40 = 5 Sets

3.6.5 Cross Table Fixing Screws LINAX® Lxe

For cross table constructions with two Lxe F40, the top part of the carriage slider that is placed on the bottom of the cross table should be removed first. The total height of the cross table will be reduced by 6mm (0.24") to 86mm (3.39").

Linear Motor Type	Screws and centering pins	Art. No.
Lxe F40	4 x hexagon socket screws M4 x 12mm (0.47") 2 x centering pins Ø 4 h8 x 8mm (0.31"), stainless	135.11.00

3.6.6 Additional Carriage Slider LINAX® Lxe

With the LINAX® Lxe linear motor axes it is possible to assemble two or more carriage sliders on the same ground plate. The cable connector can be orientated on the left or right side of the slider. Each carriage slider requires a XENAX® servo controller

Linear Motor Type	Type of carriage slider	Art. No.
Lxe xxx F40	Carriage slider to LINAX® Lxe "exclusive" F40 with precise, self-lubricating ball bearing carriages, integrated linear motor and optical measurement system , resolution 1 µm, accuracy +/-2µm	135.30.00
Lxe xxx F40	Carriage slider to LINAX® Lxe "exclusive" F40, 100nm , with precise, self-lubricating ball bearing carriages, integrated linear motor and optical measurement system , resolution 100nm, accuracy +/-500nm	135.30.05

3.7 Maintenance

3.7.1 Cleaning Glass Scale of LINAX®

At the end of the mechanical installation, the glass scale should be cleaned. Afterwards please do not touch the glass scale anymore.

If the error 54 occurs “read-head signal goes off”, the glass scale is dirty and a reading problem may result. Use a cloth and a degreasing, non-abrasive, cleaning liquid. e.g., clear, cleaning petrol from a chemist, to clean the glass scale.

3.7.2 Lubricating Cross Roller Guides ELAX® and LINAX® Lxc

Die ELAX® and LINAX® Lxc linear bearing have two cross roller cages and four miniature precision shafts. The cross roller cages contain a centering forced control with two toothed racks and a cog wheel (system Schneeberger). This cross roller guides is highly reliable and needs low maintenance. We recommend lubricating all visible shafts every 12 months.

The easiest way to do this is to moisten the guide at all accessible points with a grease-soaked cotton swab and make sure that the glass scale remains dry, otherwise clean it afterwards.

Suitable lubrication cartridges and dosage pistol can be found in chapter 3.7.4.

3.7.3 Lubricating Ball Bearing Guides LINAX® Lxe/Lxs/Lxu

As a standard the LINAX® Lxe, Lxs and Lxu are delivered with the ball bearing guides (red) which need very little maintenance
Important: If the guiding rails are cleaned, please apply new lubricant on the guides to avoid that the lubricant in the reservoir is used up too quickly.

Depending on the operational environment the linear motors are equipped with 3 different types of ball bearing guides:

Current Guiding Systems

- Red carriages, standard:** Low on maintenance, we recommend to re-lubricate every 5'000km with „Isoflex Topas NB 5051“
- Red carriages, clean room:** Re-lubricate After 3'000km or at least every 12 months with „Klüberalfa HX 83-302“
- Red oder black carriages
Food or pharma industry:** Re-lubricate After 3'000km or at least every 12 months with „Klübersynth UH1 14-151“

Integrated long term lubrication system

Application Instructions:

The carriages are lubricated with a dosage pistol in which the cartridge contains the according lubricant. The slider of the motor should be placed either in the front or in the back of its ground plate. You only have to lubricate either from the front or from the back of the linear motor, but make sure to lubricate on the top and on the bottom on the left and on the right side.

The red ball bearing carriages have two needle holes on the front face. Please put the dosage pistol through the needle hole and apply lubricant until lubricant exits on to the guiding rails.

For linear motors with an optical measuring system please make sure to remove the lubricant surplus with a cotton swap.

Suitable lubrication cartridges and dosage pistol can be found in chapter 2.5.4.

3.7.4 Lubrication sets with dosage pistol and lubrication cartridges

Linear Motor Type	Lubricatingset	Art. No.
ELAX® & LINAX®	Dosage pistol to lubricate ELAX® & LINAX® guides (excl. lubricant filled cartridge)	155.00.10
	Cartridge with standard lubricant: Lubricant "Isoflex Topas NB 5051" filled cartridge to lubricate the ELAX® & LINAX® guides. Content 20cc lubricant is enough for about 10 relubrications per motor.	155.00.11
	Cartridge with clean room lubricant: Lubricant "Klüberalfa HX 83-302" filled cartridge to lubricate the ELAX® & LINAX® guides. Content 20cc lubricant is enough for about 10 relubrications per motor.	155.00.12
	Cartridge with clean room lubricant for pharma- and food industry: Lubricant "Klübersynth UH1 14-151" filled cartridge to lubricate the ELAX® & LINAX® guides. Content 20cc lubricant is enough for about 10 relubrications per motor.	155.00.13

4 ROTAX® Rotary Motor Axis

Whether you choose the ROTAX® Rxvp with direct connection options to ELAX® linear motor slides and LINAX® linear motor axes or you go for the new ROTAX® Rxhq with enormous torque despite its small dimensions and the 12 resp. 50 mm diameter hollow shaft – the compact ROTAX® rotary motor axes from Jenny Science all work precisely, can be used flexibly and are robust in application.

4.1 ROTAX® Rxvp with Vacuum/Compressed Air Feedthrough

This ultra-compact rotary axis with vacuum gripper picks parts within a typical weight range of 1mg up to 500g. With the standard internal screw thread of M5, a lot of different commercially available vacuum grippers are applicable. This unit is the perfect fit for the ELAX® electric slide or for LINAX® linear motor axis.

The high precision rotary drive runs endless 360° with a resolution of 64'000 Inc/rev. They can be assembled in a grid of 30mm next to each other. Opposing each other, the minimal distance of the ROTAX® shafts is also 30mm. This saves space and applications can be built more compact.

Model	Measuring System [inc/rev ⁻¹]	Force Nom/Peak [mNm]	n-max [rpm]	Weight [g]	Art. No.
Rxvp 28-6T0.04, shaft 30mm (1.18") - with connection plug Ø4 - with M5 internal thread - with blind plug Rxvp 28-6T0.04, shaft 15mm (0.59") - with connection plug Ø4 - with M5 internal thread - with blind plug Rxvp 28-6T0.04, for ELAX® with weight Comp., shaft 30mm (1.18") - with connection plug Ø4 - with M5 internal thread - with blind plug Rxvp 28T0.04, for ELAX® with weight Comp., shaft 15mm (0.59") - with connection plug Ø4 - with M5 internal thread - with blind plug	64'000	40/110 (0.090/0.024 lbs)	1500	180 (0.40 lbs) 175 (0.39 lbs) 200 (0.44 lbs) 195 (0.43 lbs)	120.00.00 120.00.01 120.00.02 120.00.10 120.00.11 120.00.12 120.01.00 120.01.01 120.01.02 120.01.10 120.01.11 120.01.12

Note: ROTAX® option cleanroom, food industry and pharmaceutical industry

The ROTAX® Rxvp can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

4.1.1 Types of compressed air connections

**Connection plug outside diameter 4mm
(0.16")**

The ROTAX® Rxvp is supplied with a $\varnothing 4\text{mm}$ (0.16") connection plug as standard. Recommended hose inner diameter 3mm (suitable hose, see chapter 3.1.5).

Suitable for mounting on the flange side of ELAX® Rx linear motor slides.

M5 internal thread

Plug nipple with M5 female thread for connection coupling such as Festo QSM-M5-4I.

Not suitable for flange-side attachment to ELAX® Ex linear motor slides.

Blind plug

Blind plug, without vacuum/compressed air connection.

4.1.2 Connecting Cable ROTAX® Rxvp

With ROTAX® the cables are directly mounted into the linear motor case in favor of the compactness. The flexible one-cable connection is absolutely revolutionary which significantly simplifies the machine cabling.

In just one cable there are the wires for encoder, the 3 phases for the linear motor and for the communication between ROTAX® and XENAX® servo controller. The anthracite colored **TPU** connection cables are clean room capable and as a standard length of 1.5m on stock available. Custom lengths from 0.1 (4") up to 20m (787") can be supplied upon request. These connection cables have a min bending radius of **40mm (1.6")** for moving cables and **16mm (0.7")** for fixed cables.

As an option, extension cables are also available.

Connecting Cable shielded, suitable for cable chain	Length [m]	Rotary Motor Type	15 Pol D-Sub Connector and 3 Pol Wago 3,5mm (0.14") Art. No 1
ROTAX® anthracite, TPU, Clean Room 5-6 Operating temp. -40°C up to + 80°C, Ø 8mm (0.31")	1.5 (59")	Rxvp 28-6T0.04	150.70.00
		Rxvp 28-6T0.04 for ELAX® with weight comp.	150.70.05
	0.1-20 (4" - 787")	Rxvp 28-6T0.04	150.70.01
		Rxvp 28-6T0.04 for ELAX® with weight comp.	150.70.06

Connecting Cable prepared for extension or intermediary cable shielded, suitable for cable chain	Length [m]	Rotary Motor Type	15 Pol D-Sub connector (2 rows) Art. No 2
ROTAX® anthracite, with 15 Pol D- Sub connector (2 rows), TPU, clean room 5-6 Operating temp. -40°C up to + 80°C Ø 8mm (0.31")	1.5 (59")	Rxvp 28-6T0.04	150.71.00
		Rxvp 28-6T0.04 for ELAX® with weight comp.	150.71.05
	0.1-20 (4" - 787")	Rxvp 28-6T0.04	150.71.01
		Rxvp 28-6T0.04 for ELAX® with weight comp.	150.71.06

4.1.3 Extension or Intermediary Cable Removable ROTAX®

Extension cables are also useful for highly dynamic multi axis applications with cable chains. The replaceable extension cable is plugged onto a connecting cable. These anthracite **TPU** extension cables have a min. bending radius of **40mm (1.6")** for moving cables and **16mm (0.7")** for fixed cables.

Extension cable, shielded, suitable for cable chain	Length [m]	15 Pol D-Sub jack, 15 Pol D-Sub connector (2 rows) and 3 Pol Wago 3,5mm (0.14") Art. No. 3
ROTAX® anthrazit, TPU, Clean Room 5-6 Operating temp. -40°C up to + 80°C Ø 8mm (0.31")	1.5 (59")	150.56.01
	0.5-20 (20" - 787")	150.56.05

Intermediary cable shielded, suitable for cable chain	Length [m]	15 Pol D-Sub jack, 15 Pol D-Sub connector (2 rows) Art. No. 4
ROTAX® anthrazit, TPU, Clean Room 5-6 Operating temp. -40°C up to + 80°C Ø 8mm (0.31")	0.5-20 (20" - 787")	150.56.10

4.1.4 Hose Coupling ROTAX® Rxvp

Hose Coupling	Art. No.
Nipple $\varnothing 4a$ to M5i, ROTAX®	140.00.10
M5 to $\varnothing 4a$, Festo QSM-M5-4I	140.00.11
M5 to $\varnothing 6a$, Festo QSM-M5-6I	140.00.12

4.1.5 Hose ROTAX® Rxvp Vacuum/Compressed Air Feedthrough

Hose	Length [m]	Art. No.
$\varnothing 5a$, $\varnothing 3i$ to $\varnothing 4a$ pneumatic hose PUR black, for ROTAX®	1.5 (59")	140.00.19

Angle Bracket	Screws and dowel bushings	Art. No.
ROTAX® Rxvp to LINAX® Lxu Y lengthwise	incl. 2x Torx M4x8, 2x dowel bushings $\varnothing 7mm$, 2x centering pins $\varnothing 4x6$	135.12.20

4.1.7 D-Open End Spanner ROTAX®

D-Open End Spanner	Art. No.
5mm (0.2") for Vacuum Shaft ROTAX®	140.00.15

4.1.8 Hose- and Cable Feedthrough ROTAX®

Hose- and Cable Feedthrough	Screws and dowel bushings	Art. No.
ROTAX® on ELAX® Z sidewise	Incl. 1xTorx M4x12	140.00.01
ROTAX® on ELAX® Z and ELAX® Y upright	incl. 2x Torx M4x18, 4x Torx M3x5, Incl. 2x Torx M4x18, 4x Torx M3x5, 4x dowel bushings Ø7mm	140.00.02

4.1.9 Y-Z-R Pick and Place Upright

Pick and Place upright	Screws and dowel bushings	Art. No.
Rxvp 28-6T0.04	2 x dowel bushings Ø7mm (0.28") 2 x torx with low head, M4 x 8mm (0.31")	136.10.01

4.2 ROTAX® Rxhq 50-12T0.3 (High Torque)

ROTAX®

Rxhq 50-12T0.3

The miniature hollow shaft servo motor ROTAX® Rxhq (High Torque) impresses with its extremely compact design. **Direct drive motor, precise bearings and the single turn absolute encoder are completely integrated.**

The ROTAX® Rxhq does not require a gearbox. This means no wear and the highest precision over the whole lifetime. The drive is maintenance-free and contains no lubricants. Furthermore, the reaction time is significantly shorter than with geared motors. This aspect is enhanced by a low rotary inertia which allows high acceleration values. This means shorter cycle times and higher productivity, so it is also ideal for high-speed applications.

The through hollow shaft of $\varnothing 12\text{mm}$ (0.47") offers generous space for cables, vacuum or compressed air lines, light and laser beams, glass fibres, cameras and other media.

Typically, such special motors require an external encoder. This will result in larger dimensions and more complex wire installation. For this reason, the ROTAX® Rxhq already has a precision encoder built in.

4.2.1 ROTAX® Rxhq 50-12T0.3

Model	Measuring system [inc/rev ⁻¹]	Force Nom/Peak [mNm]	Nominal Speed 48V [rpm]	Weight [g]	Art. No.
Rxhq 50-12T0.3 cable connection on the right side	120'000 magnetic	300/1'020 (2.66 – 9.03 lbf in)	1'500	440 (0.97 lbs)	121.00.00

Angle Bracket	Screws and dowel bushings	Art. No.
Angle Bracket Lxu F60	2 x centring pin $\varnothing 4 \times 8$ 4 x Torx, M4 x 14 4 x distance bushings with centering 4 x hexagon socket screws, M4 x 52	140.05.10

4.2.8 Angle Bracket ROTAX® Rxhq 50-12T0.3 to LINAX® Lxc F10/F40

Angle Bracket	Screws and dowel bushings	Art. No.
Angle Bracket Lxc F10/F40	2 x Dowel pin $\varnothing 2.5 \times 6$ 4 x Torx, M3 x 12 4 x distance bushings with centering 4 x hexagon socket screws, M4 x 52	140.05.11

4.2.9 Angle Bracket ROTAX® Rxhq 50-12T0.3 to ELAX® Ex F20

Angle Bracket	Screws and dowel bushings	Art. No.
Angle Bracket Ex F20	2 x Centering ring $\varnothing 6$ 4 x Torx, M3 x 12 4 x distance bushings with centering 4 x hexagon socket screws, M4 x 52	140.05.12

4.3 ROTAX® Rxhq 110-50T1.5 (High Torque)

ROTAX®

Rxhq 110-50T1.5

The direct drive motor developed in-house is based on the magnetic flux technology of wind turbine generators. This results in a high torque with compact installation space. In figures, this means a factor of two to three greater torque with the same construction volume compared to conventional direct drives from competitors. The continuous hollow shaft with a diameter of 50mm offers generous space for cables, vacuum or compressed air lines, light and laser beams, glass fibres or camera lenses. The absolute measuring system allows an immediate start without previous referencing. The single-cable connection can be supplied in right-hand or left-hand output configuration.

Together with the patented "Force Calibration" function, undesired cogging, weight and friction forces of the ROTAX® Rxhq direct drives can be easily compensated. This makes it possible to specify, limit and monitor forces in processes. Together with the Forceteq® basic technology included in the XENAX® servo controller, complete force/distance diagrams can be recorded - an additional torque sensor is not necessary.

Specific advantages, USP's

- Ultra compact dimensions
- Oversized continuous hollow shaft
- High torque - no gearbox
- Integrated absolute encoder system
- Single cable connection

4.3.1 ROTAX® Rxhq 110-50T1.5

	0.5-20 (20" - 787")	150.56.05

Intermediary cable shielded, suitable for cable chain	Length [m]	15 Pol D-Sub jack, 15 Pol D-Sub connector (2 rows) Art. No. 4
ROTAX® anthrazit, TPU, Clean Room 5-6 Operating temp. -40°C up to + 80°C Ø 8mm (0.31")	0.5-20 (20" - 787")	150.56.10

4.3.4 Fixing screws with dowel bushings ROTAX® Rxhq 110-50T1.5

Rxhq 110-50T1.5	Accessories	Art. No.
Fixings screws with dowel bushings	4 pcs, hexagon socket screws, M4x25mm 4 pcs, dowel bushings with centering Ø8g6x2.8	140.10.00

4.3.5 Dowel bushings ROTAX® Rxhq 110-50T1.5

Dowel bushings	Dowel bushings Ø 8mm	Art. No.
Dowel bushings	10 x Ø 8mm -0.005/-0.014 x 2.8mm	140.10.05

4.4 ROTAX® Rxhq 110-50T4.0 (High Torque)

The direct drive developed in-house impresses with its compact external dimensions and a hollow shaft with a diameter of 50 mm. Cables, vacuum or compressed air lines, light and laser beams, glass fibres or camera lenses can be guided through the hollow shaft without any problems.

The absolute measuring system allows an immediate start without previous referencing. With a resolution of 648'000 or 2'592'000inc. per revolution, repeatability of ± 1 arcsec can be achieved. The single-cable connection can be supplied in right-hand or left-hand output configuration.

Together with the patented "IForce Calibration" function, undesired cogging, weight and friction forces of the ROTAX® Rxhq direct drives can be easily compensated. This makes it possible to limit and monitor torques in processes. Together with the Forceteq® basic technology included in the XENAX® servo controller, complete torque/distance diagrams can be recorded - an additional torque sensor is not necessary.

Specific advantages, USP's

- Ultra compact dimensions
- Oversized continuous hollow shaft
- High torque - no gearbox
- Integrated absolute encoder system
- Single cable connection

4.4.1 ROTAX® Rxhq 110-50T4.0

Model	Measuring system optical [inc/rev ⁻¹]	Force Nom/Peak [Nm]	Nominal speed 48V [rpm]	Weight [g]	Art. No.

	2'592'000		200		121.10.30

Note: ROTAX® option cleanroom, food industry and pharmaceutical industry

The ROTAX® Rxhq can be mounted in clean room standard with additional charge of 10%. The ball bearing carriages are filled with a special lubrication. If you wish to use this option, please add the note „**OPTION CLEANROOM/FOODINDUSTRIE/AND PHARMACEUTICAL INDUSTRY**“ (depending on your requirement) on your purchase order.

4.4.2 Connecting Cable ROTAX® Rxhq 110-50T4.0

Absolutely revolutionary is the flexible one-cable connection, which reduces the machine cabling effort considerably. In only one cable are the lines for encoder, for the 3 phases of the motor and for the communication between ROTAX® Rxhq and XENAX® Servocontroller. These connection cables have a minimum bending radius of **48mm for continuous movement** and of **20mm for fixed cables**. Extension cables are also available as accessories.

Connecting Cable shielded, suitable for cable chains	Length [m]	15 Pol D-Sub Connector and 3 Pol Wago 3,5mm - M16 Stecker Art. No. ①

5 XENAX® Servo Controller

XENAX® Xvi 75V8S

XENAX® Xvi 48V8

XENAX® Xvi 75V8

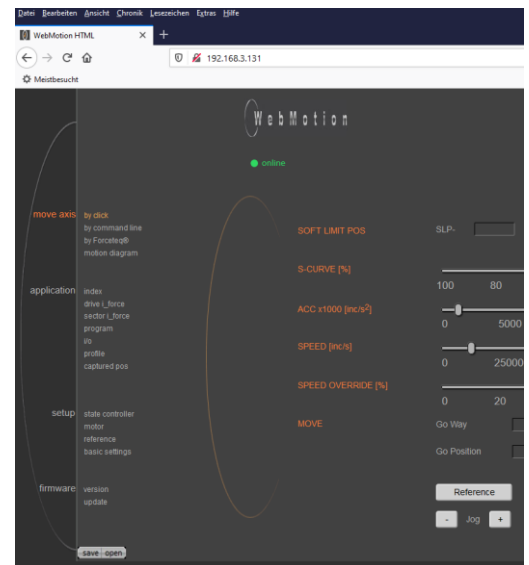

Setup

The XENAX® servo controllers can be operated via web browser for commissioning, testing and parameterization. With an Ethernet switch, you can instantly combine several axes for multi-axes operation. Inputs and outputs for PLC functionality are available. The firmware can handle up to 64 programs, 50 positioning points, 10 force limited drives, 10 force sectors and 5 trajectory profiles.

Power-current supply:

The typical POWER supply is 24V DC. For the stronger LINAX® F40 / F60 axes with high masses (>2kg) or high dynamics (>1.5m/s) a POWER supply of 48V or 72V DC is applicable. The current consumption per axis can be up to 8A and 18A peak per axis. Depending on mass in motion, profile and power supply voltage.

For a detailed calculation of the required power supply in your application, please contact our support <https://www.jennyscience.ch/en/Service>.

Important: The 0V line of the power supply must be connected to a ground point of the machine chassis.

5.1 XENAX® Servo Controller Model Overview

Weight [g]	840 (1.85 lbs)	720 (1.59 lbs)	515 (1.14 lbs)

(X) = Optional possible

* The XENAX® Xvi 75V8 is replaced by the Xvi 75V8S. Do not use for new projects.

You can download the XENAX® manual from our website: www.jennyscience.ch/en

5.1.1 Licenses for XENAX® Xvi 48V8

XENAX® Xvi 48V8 Licenses	Art. No.
License Force Processes (Forceteq® basic)	130.25.00
Licenses LINAX®	130.25.05

5.1.2 PLC and Optio Kabel

PLC and Optio cables to XENAX® Xvi 75V8/S round, shielded, free wire end (PLC) and RJ45 cable, shielded	Length [m]	Art. No.
PLC 26 Pole, 12 Input / 8 Output	1.5 (59")	150.24.30
	3 (118")	150.24.31
	0.1-20 (4" - 787")	150.24.39
Optio 8 Pole, CAN (Xvi75V8S), Puls/Direction, 2nd encoder channel	0.5 (20")	150.31.00

PLC and Optio cables to XENAX® Xvi 48V8 round, shielded, free wire end	Length [m]	Art. No.
PLC 15 Pol, 4 Input / 2 Output, Optio 8 Pol, Pulse/Direction, 2nd encoder channel	1.5 (59")	150.24.40
	3 (118")	150.24.41
	0.1-20 (4" - 787")	150.24.49

5.1.3 Start-up Key

XENAX® Start-up Key	Art. No.
Start-up Key with EEPROM and 2 Adresscoding-switches 01 – 99	130.04.00

All parameters and application programs can be saved to the Start-up Key. The Start-up Key can be plugged into a new, unprogrammed servo controller and when powered on, all data will be installed automatically. At the same time, the card identifier (CI) is also read from the Start-up Key into the XENAX®.

5.1.4 I/O Box for Commissioning and Testing

XENAX® I/O Box 12 switches for Inputs, 4 Inputs binary coded with rotary switches 8 LED for Output 1-8	Art. No.
Xvi 75V8/S, LED bicolor green= 0V, red = 24V	130.07.10
Adapter cable for Xvi48v8	150.24.45

The XENAX® I/O box is useful for the set up and testing of the Linear-Motor with the XENAX® Controller. 8 switches are connected to inputs 1-8. The binary coded rotary switch is connected to inputs 9-12. This is how programs 1-15 can be preselected (operation mode 10 or higher). Through input trigger 8 the preselected program will be started. With the Xvi 75V8 or Xvi75V8S the outputs can be chosen to be sink driver (0V) or source driver (24V) or both. The 8 LED will show the current status. The I/O box can be connected directly to the PLC I/O socket of the XENAX® (cable length 60cm (23")).

5.1.5 Brake Energy Converter

XENAX® Brake Energy Converter	Art. No.
Brake Energy Converter	130.08.05
Brake Energy Converter UL	130.08.06

Converts the braking energy in heat, so the voltage of the power supply does not increase, and proper function does not interfere. It can be used for power supplies from 24 – 72 VDC. Up to 3 servo controllers can be attached. Ppeak 500W.

5.1.6 Cable for Brake Energy Converter

XENAX® Cable for Brake Energy Converter	Length [m]	Art. No.
Cablesset for Brake Energy Converter 1x0.19m (7.5")/1x0.24m (9.5")/ 1x0.29m (11.4")	0.19+0.24+0.29 (7.5"+9.5"+11.4")	150.35.00
Cable for Brake Energy Converter	0.19 (7.5")	150.35.05
	0.24 (9.5")	150.35.10
	0.29 (7.5")	150.35.15
	0.1-5 (4"-197")	150.35.20
WAGO Connector Male for BEC-Side Note: Female is included together with XENAX®		151.10.06

5.1.7 EMC Shielding Clamp for Motor Cable

XENAX® EMC shielding clamp	Art. No.
EMC shielding clamp	130.09.00

The EMC shielding clamp ensures a secure and simple connection of the shield to the motor cable and helps to avoid errors on data transfers. The shielding clamp is for LINAX® linear motors, ELAX® electric slides as well as ROTAX® designed. With an additional cable binder, the cable will also be strain-relieved.

5.1.8 Y-Cable for Encoder Signal Pick-Up

XENAX® Y-Cable	Length [m]	Art. No.
Y-Cable	2 x 0.2m (7.9")	150.28.00

The Y-cable allows picking up the quadrature encoder signals (A, B) of the measurement system for external control process or for an "electronic gear-box". The signal transfer is differential, RS422.

5.1.9 Master-Slave Cable

XENAX® Master-Slave Cable	Length [m]	Art. No.
Master-Slave Cable	0.5 (19.7")	150.25.20

The master-slave operation is software based via I2C bus. It is typical for handling modules. For example, with three linear motor axes a Pick & Place application with rotary axis can be realized. The programming has to be completed with the master device, which automatically recognizes the connected slave devices. Each device is identified with a Card Identifier (CI), the master always carries the number 0.

5.1.10 Computer Cable PC/Laptop for RS232

XENAX® RS232-Cable	Length [m]	Art. No.
RS232-Cable D-Sub 9 Pol to USB-B	1.8 (70.9")	150.20.00

With this computer cable the RS232 interface is connected to the XENAX® servo controller. The cable is usually used for communications or for service purposes. Do not use for the standard version of XENAX® Xvi 75V8S (only for Xvi 75V8S with the RS232 option). The standard version of the XENAX® Xvi 75V8S has a USB interface.

5.2 XENAX® Xvi Bus modules

XENAX® Xvi (Intuitiv)

Xvi 48V8

Xvi 75V8

Xvi 75V8S

IRT (Isochrone Real Time)

Bus Protocol		Art. No.
EtherCAT® MP ¹⁾ Profinet® MP ⁴⁾ EtherNet/IP® MP ⁵⁾ POWERLINK® ²⁾ CANopen® ³⁾	Bus module clipped onto XENAX® Xvi Rapid, internal data binding via data and address bus	130.10.30 130.10.32 130.10.31 130.10.10 130.10.05

MP = Multiprotocol -> One module hardware with licence for the corresponding protocol (Cannot be modified by the user. Please specify protocol with order)

1), 2), 3) The user application interface is standardized according to CANopen® over Ethernet DS 301 and DS402 (Communication and Drive control protocol profiles).

¹⁾ Including a PLCopen library for TwinCAT 3.

PLC samples for OMRON NJ2 controller available on demand.

²⁾ Including PLCopen library for Automation studio.

³⁾ PLC sample for Schneider Electric controller available on demand.

⁴⁾ The interface is standardized according to PROFIdrive, including PLCopen Libraries for TIA Portal and SIMATIC.

⁵⁾ Including PLCopen AOP for Studio5000

Example with RJ45 0.1m und Xvi 75V8S:
Art. 150.31.01

Cable	Protocol	Art. No.
Patch-cable RJ45 Ethernet-Bus module Cat 5e, yellow, length 0.5m (1.97")	Ethernet TCP/IP / EtherCAT® / POWERLINK®	150.31.00
Patch-cable RJ45 Ethernet-Bus module flat, Cat 6, white, length 0.1m (0.39")	Profinet® / EtherNet/IP®	150.31.01

5.3 Xvi 75V8/S Safety Motion Unit (SMU) TÜV certified

XENAX® Xvi 75V8/S SMU	Art. No.
Safety Motion Unit (SMU) SIL2, Perform. Level D, Cat 3, Safety STO, SS1, SS2, SLS	130.20.00

In order to use the TÜV certified functional safety, a XENAX® servo controller Xvi 75V8/S with optional integrated Safety Motion Unit (SMU) is needed.

Functional Safety:

STO	Safe Stop Off	Immediate shut-down to the output stage
SS1	Safe Stop 1	Stop followed by shut-down of the output stage
SS2	Safe Stop 2	Stop while remaining in stop position, axis remains under power, power stage active
SLS	Safely Limited Speed	Limiting and Observing of a safe speed. If Safety Limited Speed (SLS) is exceeded, Safe Stop (SS2) while observing the position window. If position window is exceeded as well, then triggering STO, shut-down of The output stage.

Subsequent upgrade of SMU modules on existing XENAX® Xvi75V8 Servo Controllers is only possible on hardware V4 and higher and can only be completed by Jenny Science assembly.

Functional Safety with SMU can be used for all LINAX® und ELAX® linear motor types and for rotary brushless motors. Rotary brush type DC motors are excluded of the TÜV certified functional safety.

5.4 Forceteq® pro

5.4.1 Signateq® Force Measuring Amplifier

Signateq® is a measuring amplifier for any DMS force sensors especially developed for connection to the XENAX® Xvi 75V8S servo controller. This allows even smaller forces to be measured precisely with Forceteq® technology. Force control, recording and evaluation are done directly in the servo controller. No additional hardware is required. The measuring amplifier is in a compact housing and can, for example, be screwed onto the side of the ELAX® linear motor carriage in a very space-saving way.

Signateq® Force Measuring Amplifier		Art. No.
Signateq® force measuring amplifier for XENAX® Xvi 75V8S	Signateq® measuring amplifier for any strain gauge load cells. The measuring amplifier must be gauged together with the force sensor as a pair.	154.30.00
Gauging Signateq® measuring amplifier with force sensor	Wiring of the force sensor to Signateq® measuring amplifier. Gauging of the Signateq® amplifier with the force sensor as a pair. Measurement report is supplied.	154.30.10

The following information must be provided by the customer for the gauging:

- Cable length from sensor to Signateq®
- Measuring range to be calibrated and its direction (tension, compression, tension/compression)
- Preload from the force sensor (if available)
- Data sheet from the force sensor or force sensor type and sensitivity (if not from JSc supplied)

Connecting Cable Signateq®	Length [m]	Art. No.
Connecting Cable Signateq® to XENAX® Xvi 75V8S with RJ45 plug	1.5 (59") 3.5 (138") 5.0 (197")	150.09.00 150.09.01 150.09.02

5.4.2 Compact Jenny Science sensor-housing

The miniature compression load cell of the Burster series 8416 in an extremely compact housing from Jenny Science. It offers overload protection up to 1kN and preloading of the sensor to 3N. The housing has the same dimensions and mounting options for all force ranges. A change of the force range is therefore easily possible without mechanical modification.

Housing without force sensor. Select the appropriate force sensor from chapter 5.4.3.

Sensor in housing	Data	Art. No.
Housing for 0–20N Burster 8416-5020	Overload protection up to 1kN and preloaded to 3N	154.39.20
Housing for 0–50N Burster 8416-5050		154.39.30
Housing for 0–100N Burster 8416-5100		154.39.40
Housing for 0–200N Burster 8416-5200		154.39.50

5.4.3 Load cell Burster without housing

Due to their extremely compact design, these load cells can be used wherever static or dynamic load forces have to be measured in very tight spaces.

Model 8416 is perfect for use in micro-technology and just as suitable for measuring tasks in the research and development sector.

Ultra-Miniature Load Cell MODEL 8416

Sensor without housing	Data	Art. No.
0–20N Burster 8416-5020 no overload protection	Sensitivity 1mV/V / Resolution 5.4mN/0.55gf Relative non-linearity 0.25%	154.33.08
0–50N Burster 8416-5050 no overload protection	Sensitivity 1mV/V / Resolution 13.4mN/1.37gf Relative non-linearity 0.25%	154.34.08
0–100N Burster 8416-5100 no overload protection	Sensitivity 1mV/V / Resolution 26.8mN/2.73gf Relative non-linearity 0.25%	154.35.08
0–200N Burster 8416-5200 no overload protection	Sensitivity 1mV/V / Resolution 53.6mN/5.47gf Relative non-linearity 0.25%	154.36.08

5.4.4 Load cell Burster with overload protection

Precise tension and compression force measurements can be performed in limited space with model 8431 and 8432 precision miniature load cells. High precision, various measuring ranges, convenient load application via threaded pins with external winding and small dimensions offer a wide scope of applications in laboratories and production.

Sensor without housing	Data	Art. No.
0–5N Burster 8432-5005 with overload protection to 25N	Sensitivity 0.75mV/V / Resolution 1.3mN/0.13gf Relative non-linearity 0.20%	154.31.05
0–10N Burster 8432-5010 with overload protection to 50N	Sensitivity 1.5mV/V / Resolution 2.7mN/0.28gf Relative non-linearity 0.20%	154.32.05
0–20N Burster 8432-5020 with overload protection to 100N	Sensitivity 2mV/V / Resolution 5.4mN/0.55gf Relative non-linearity 0.20%	154.33.05

0–100N Burster 8432-5100 with overload protection to 500N	Sensitivity 2mV/V / Resolution 26.8mN/2.73gf Relative non-linearity 0.20%	154.35.05
0–200N Burster 8432-5200 with overload protection to 1kN	Sensitivity 2mV/V / Resolution 53.6mN/5.47gf Relative non-linearity 0.20%	154.36.05

6 Commercial Products

6.1 AC-Servo Motor (new intercontec plugs)

Type	Mn/Mpeak [Nm]	n-max [rpm]	Specifications	Art. No.
B28D4I	0.38 / 1.4 (3.45 / 12.39 lbf in)	6000	No key-way	113.04.10
B28D4I-K			With key way	113.05.20
B28D4I-KB			With key way and brake	113.05.30

Three phase servo motor

These brushless servo motors contain a 4 pole winding, brushless and an integrated encoder (4096 inc. per rev.) with A/B channel and line driver. All motors have a fully shielded metallic Intercontec connectors, suitable for harsh industrial environment.

6.1.1 Connecting Cable AC-Servo Motor

Cable Type	Type	Length [m]	Art. No.
Motor for Xvi	Intercontec jack, 3 Pol Wago 3,5mm (0.14")	X.X	150.02.12
Motor for Xvi with Brake	Intercontec jack, 3 Pol Wago 3,5mm (0.14") 26 Pol D-Sub connector for XENAX® Xvi	X.X	150.02.15
Motor for Sv	Intercontec jack, 3 Pol Wago 5,0mm (0.2")	X.X	150.02.17
Encoder /Hall Sv, Xvi with and without Brake	Intercontec jack, 15 Pol HD D-Sub	X.X	150.03.12

*) Special motor cable for servo motors with brake controlled by all other Jenny Science controllers are available upon request.

6.2 Ultra Compact Rotary Axis with Hollow Shaft

Type	Mn/Mpeak [Nm]	n-max [rpm]	Flange, Hollow Shaft	Art. No.
RA 60R30	1.8 / 4.5 (15.9 / 39.8 lbf in)	200	60 x 60mm (2.36 x 2.36") Ø 8.0mm (0.31")	113.06.10

Ultra compact, three-phase servo motor with 10 pole winding and a high precision reduction gear of 1:30 which is free from backlash. The internal encoder has 8'000 increments A/B per revolution on the motor shaft. These are 240'000 inc. per revolution at the hollow shaft output of the gear. Accordingly, the resolution is 5.4 arc seconds. The connection cables of 0.2m (7.9") are standard, with one round connector and one HD-D-Sub connector assembled. These cables are suitable to connect with extension cables at different lengths.

6.2.1 Ultra Compact Rotary Axis Connecting Cable

IGUS, blue, Temp. moving -35° up to +100° Clean room suitable and oil resistant	1.5 (59")	150.46.01	150.47.01
	3.5 (138")	150.46.03	150.47.03
	5.0 (197")	150.46.05	150.47.05
	0.1-20 (4"-787")	150.46.10	150.47.10

These extension cables for the ultra compact rotary axis are identical to the extension cables of the LINAX® Lxc / Lxe linear motor axes.

6.3 Round Table with Direct Drive and Hollow Shaft

Modell	Mn/Mpeak [Nm]	n-max [rpm]	Flange, Hollow shaft	Art. No.
RT-120-25H80	1.8 / 6.5 (15.9 / 57.5 lbf in)	955	120 x 80mm (4.72 x 3.15") Ø 25mm (0.98")	113.07.12
RT-120-37H37	0.6 / 2.1 (5.3 / 18.6 lbf in)	400	120 x 37mm (4.72 x 1.46") Ø 30mm (1.18")	113.07.19

The direct drive is an ironless torque motor without cogging forces. The high resolution measuring encoder is integrated and has a zero-pulse per rotation for the reference. The RT hollow shaft motors can be directly controlled with a XENAX® Xvi servo controller.

One motor connecting cable and one cable fan out (encoder and hall cable) of each 3.0m (118") is included as a standard, mounted with a 3 pole Wago 3.5mm (0.14") and 15 pole HD connector.

6.3.1 Round Table with Direct Drive and Hollow Shaft and extension cable

Modell	Art. NO.
RT-120-25H80 for extension	113.07.13
RT-120-37H37 for extension	113.07.20

Extension cables shielded, suitable for cable chain	Length [m]	Motor 3 pole round connector "Binder", Wago 3,5mm (0.14") Art. No.	Encoder 15 pole HD connector To 15 pole HD jack Art. No.
Lütze, grau, Temp. moving -25° up to +80°	1.5 (59")	150.26.01	150.27.01
	3.5 (138")	150.26.03	150.27.03
	5.0 (197")	150.26.05	150.27.05
	0.1-20 (4"-787")	150.26.10	150.27.10
IGUS, darkblue, Temp. moving -35° up to +100° Clean room suitable and oil resistant	1.5 (59")	150.46.01	150.47.01
	3.5 (138")	150.46.03	150.47.03
	5.0 (197")	150.46.05	150.47.05
	0.1-20 (4"-787")	150.46.10	150.47.10

These extension cables for the ultra compact rotary axis are identical to the extension cables of the LINAX® Lxc / Lxe linear motor axes.

6.4 Setup and Cabeling of non Jenny Science Motors

The XENAX® servo controllers are also suitable to control commercial brushless and brush type three phases servo motors (AC-/BL- /EC-). Of course it is also possible to control brush type DC Motors. For that purpose it is necessary to use rotary encoders with A / B signals (preferably differential, RS422). When powering on the electrical angle is determined with the hall signals. Then the vector oriented current commutation can be completed. For brush type DC motors an incremental encoder is needed.

Cables Servo Motor

Assembling cables	Cable	Length [m]	Art. No.
Motor 3 pole, Wago 3,5mm (0.14") Encoder/Hall 15 pole HD D-Sub	Lütze, shielded	1.5 (59")	150.90.00

Preparing Motor Parameters

Motor Parameter	Necessary parameters	Parameter Memory	Art. No.
according data sheet of servo motor	Torque constant [Nm/A] Rotor inertia [kg*m2] Number of pole pair [1] Resistance phase to phase [mΩ] Inductivity phase to phase [μH] Nominal current [A] Resolution of encoder [INC/REV]	WebMotion® Open -> from File Save -> to XENAX	150.90.05

The XENAX® Xvi controls with state controller and observer mathematically. This is why the exact motor data is necessary.

This parametrization can also be completed by the end user. Please refer to the manual **Param_Rotativ_Xvi.pdf** on www.jennyscience.ch under „DOWNLOAD“.
