Dear ,

Do you already use our new servo controller XENAX® Xvi 75V8S?

No? Then read on and see the advantages compared to the XENAX® Xvi 75V8!

The XENAX® Xvi 75V8S is the further development of our XENAX® Xvi 75V8 and supports all previous functionalities. The WebMotion® is now based on HTML5 which further increases the user-friendliness.

A highlight is the possibility of a precise force measurement with our Signateq® measuring amplifier and any strain gauge force sensor. Position and force values are processed directly in the XENAX® Xvi servo controller without additional electronics. These values are then cyclically transferred to your PLC as process data objects (PDO). Sampling rates of up to 250µs can be achieved.

In our [YouTube Tutorial 2](#) you can see how to set up the XENAX® Xvi 75V8S via Webbrowser.

For specific information, please contact our experts.
